# Noções de complexidade de algoritmos III

(exercícios)

#### **Atividade**

Calcule as quantidades de instruções, bem como a complexidade de pior caso (O) dos trechos de programas que se seguem.

```
int x = 0;

x = x + 1;

printf("%d", resultado); - - 1
```

Resposta: pior caso O(1)

```
int numero; -
scanf("%d", &numero); - 1
if(numero % 2 == 0) = ~~...
 numero = numero + 1;+1
else 🛰
 numero = numero - 1; -
                                       Resposta: pior caso O(1)
printf("%d", numero); - \
